

# Outline

---

- Lesson 1: HTML
  - Introducing HTML and HTML Elements
- Lesson 2: HTML Basic tags
  - Headings, paragraphs, line breaks
- Lesson 3: HTML Formatting tags
  - Bold, italics, underline
- Lesson 4: HTML Entities
  - Common character entities

# Outline

---

- Lesson 5: HTML Links
  - Creating links
- Lesson 6: HTML Lists
  - Creating ordered lists, unordered lists
- Lesson 7: HTML Tables
  - Creating tables, headers, rows and data
- Lesson 8: HTML Form
  - Creating Forms, input boxes and input buttons

# Outline

---

- Lesson 9: Some More Tags
  - Image, font, div
- Conclusion

# Lesson 1: HTML Introduction

---

- Stands for Hyper Text Markup Language.
- Predominant markup language for web pages.
- Provides a means to create structured documents.
- Allows images and objects to be embedded and used to create interactive forms.

# Lesson 1: HTML Elements

---

- HTML documents are text files made up of HTML elements.
- HTML elements are defined using HTML tags.

# Lesson 2: Basic Tags

- `<html>`
- `<head>`
- `<style>`
- `<title>`
- `<body>`
- `<h1>` to `<h6>`
- `<p>`
- `<pre>`
- `<br>`
- `<hr>`
- `<!-->`

# <html> </html>

- Tells the browser that this is an HTML document.
- It has a closing tag.

# `<head>` `</head>`

- Container for all the head elements.
- Elements inside `<head>` can include scripts, instruct the browser where to find style sheets, provide meta information, and more.
- The following tags can be added to the head section: `<base>`, `<link>`, `<meta>`, `<script>`, `<style>`, and `<title>`.
- It has a closing tag.

# `<style>` `</style>`

- Defines style information for an HTML document.
- Inside the style element we specify how HTML elements should render in a browser.
- The required type attribute defines the content of the style element. The only possible value is "text/css".
- The style element always goes inside the head section.
- It has a closing tag.

# <title> </title>

- Defines the title of the document.
- The title element is required in all HTML/XHTML documents.
- The title element:
  - defines a title in the browser toolbar
  - provides a title for the page when it is added to favorites
  - displays a title for the page in search-engine results
- It has a closing tag.

**<body>** **</body>**

- Defines the documents' body. It contains all the contents of the document (like text, images, etc.).
- It has a closing tag.

**<h1>..

######**

- Defines headers. <h1> defines the largest header. <h6> defines the smallest header.
- It has a closing tag.
- Attributes:
  - Align
    - Left
    - Center
    - Right
    - Justify
      - Specifies the alignment of the text in the header.

`<p>` `</p>`

- Defines a paragraph.
- It has a closing tag.
- Attributes:
  - Align
    - Left
    - Center
    - Right
    - Justify
      - Specifies the alignment of the text in the header.

# `<pre>` `</pre>`

- The `<pre>` tag defines preformatted text.
- Text in a pre element is displayed in a fixed-width font (usually Courier), and it preserves both spaces and line breaks.
- It has a closing tag.

# <br>

- Inserts a single line break.
- It does not have a closing tag.
- **Convention:**
  - Use <br />

# <hr>

- Inserts a horizontal rule.
- It does not have a closing tag.
- **Convention:**
  - Use `<hr />`

- Used to insert a comment in the source code.  
A comment will be ignored by the browser.
- Used to explain the code.

# Lesson 2: Wrap-up

---

- Any questions.

# Lesson 3: HTML Formatting

---

- `<b>`
- `<i>`
- `<u>`

**<b>** **</b>**

---

- Defines bold text.
- It has a closing tag.

- Defines italicised text.
- It has a closing tag.

<u> </u>

- Defines underlined text.
- It has a closing tag.

# Lesson 3: Wrap-up

---

- Any questions.

# Lesson 4: HTML Entities

- Some characters like the < character, have a special meaning in HTML, and therefore cannot be used in the text.
- Ex. : To display a less than sign (<) in HTML, we have to use a character entity.
- A character entity has three parts: an ampersand (&), an entity name or a # and an entity number, and finally a semicolon (;).
- **Entities are case sensitive.**

# Common Character Entities

Result	Description	Entity Name	Entity Number
	non-breaking space	&nbsp;	&#160;
<	less than	&lt;	&#60;
>	greater than	&gt;	&#62;
&	ampersand	&amp;	&#38;
"	quotation mark	&quot;	&#34;
'	apostrophe	&apos; (does not work in IE)	&#39;

# Character Entities (contd...)

Result	Description	Entity Name	Entity Number
¢	cent	&cent;	&#162;
£	pound	&pound;	&#163;
¥	yen	&yen;	&#165;
€	euro	&euro;	&#8364;
©	copyright	&copy;	&#169;
®	registered trademark	&reg;	&#174;
×	multiplication	&times;	&#215;
÷	division	&divide;	&#247;

# Lesson 4: Wrap-up

---

- Any questions.

# Lesson 5: HTML Links

---

- HTML uses a hyperlink to link to another document on the Web.

# HTML Links

---

- Creating hyperlinks
- Using image as a link.
- The anchor tag and its common attributes

`<a>` `</a>`

- Creates a link to another document.
- It has a closing tag.
- href attribute:
  - used to address the document to link to.
- target attribute:
  - define where the linked document will be opened.
    - `_blank`, `_self`
- name attribute:
  - used to create a named anchor.

# Lesson 5: Wrap-up

---

- Any questions.

# Lesson 6: HTML Lists

- With HTML we can create lists.
- The most common HTML lists are ordered and unordered lists.
  - An Ordered List:
    1. Item 1
    2. Item 2
    3. Item 3
  - An Unordered List:
    - Item 1
    - Item 2
    - Item 3

# HTML Lists

---

- `<ol>`
- `<li>`
- `<ul>`

`<ol>` `</ol>`

- Defines an ordered list.
- The list can be numerical or alphabetical.
- It has a closing tag.
- Attributes:
  - start:
    - Specifies the start point in a list.
  - type:
    - Specifies which kind of bullet points will be used.
      - 1, A, a, I, i.

`<li>` `</li>`

- Defines a list item.
- It is used in both ordered (`<ol>`) and unordered (`<ul>`) lists.
- It has a closing tag.
- Attributes:
  - type:
    - Specifies which kind of bullet point will be used.
      - 1, A, a, I, i, disc, square, circle.

`<ul>` `</ul>`

- Defines an unordered list.
- It has a closing tag.
- Attributes:
  - type:
    - Specifies the style of the bullet points of the list items.
      - Disc, square, circle.

# Lesson 6: Wrap-up

---

- Any questions.

# Lesson 7: HTML Tables

---

- With HTML we can create tables.
- A table is divided into rows, and each row is divided into data cells.
- A data cell can contain text, images, lists, paragraphs, forms, horizontal rules, tables, etc.

# HTML Tables

---

- `<table>`
- `<tr>`
- `<th>`
- `<td>`

# <table> </table>

- Defines a table.
- Inside a <table> tag we can put table headers, table rows, table cells, and other tables.
- It has a closing tag.
- Attributes:
  - align:
    - left
    - center
    - right
  - border:
    - Border width.
  - cellpadding:
    - Space between the cell walls and contents.
  - cellspacing:
    - Space between cells.
  - width:
    - Width of the table.

`<tr>` `</tr>`

- Defines a table row.
- Contains one or more `<th>` or `<td>` tags.
- It has a closing tag.
- Attributes:
  - align:
    - left
    - center
    - right
  - bgcolor:
    - Background color.

**<th> </th>**

- Defines a table header cell in a table.
  - The text within the the element usually renders in bold.
  - It has a closing tag.
- Attributes:
    - align:
      - left
      - center
      - right
    - bgcolor:
      - Background color.
    - colspan
      - Sets the number of columns a cell should span
    - rowspan
      - Sets the number of rows a cell should span

`<td>` `</td>`

- Defines a table standard cell in a table.
  - The text within the the element is usually standard.
  - It has a closing tag.
- Attributes:
    - align:
      - left
      - center
      - right
    - bgcolor:
      - Background color.
    - colspan
      - Sets the number of columns a cell should span
    - rowspan
      - Sets the number of rows a cell should span

# Lesson 7: Wrap-up

---

- Any questions.

# Lesson 8: HTML Forms

---

- With HTML we can create forms.
- HTML Forms are used to select different kinds of user input.
- Forms are used to pass data to a server.
- A form can contain input elements like text fields, checkboxes, radio-buttons, submit buttons and more.
- A form can also contain select lists, textarea, fieldset, legend, and label elements.

# HTML Forms

---

- `<form>`
- `<input>`

# `<form>` `</form>`

- Used to create an HTML form for user input.
- It contains one or more `<input>` tags.
- It has a closing tag.
- Attributes:
  - action:
    - Specifies where to send the form-data when a form is submitted.
  - method:
    - Specifies how to send form-data.
      - get, post.
  - name:
    - Specifies the name for a form.

# <input>

- Used to select user information.
- An input field can vary in many ways, depending on the type attribute. An input field can be a text field, a checkbox, a password field, a radio button, a button, and more.
- It does not have a closing tag.
- **Convention:**
  - Use `<input />`
- **Attributes:**
  - name:
    - Specifies a name for an input element.
  - type:
    - button, checkbox, password, radio, reset submit, text.
  - value:
    - Specifies the value of an input element.

# <input>

```
<form name="input" action="html_form_action.html" method="get">
  <input type="text" name="firstname" />
  <input type="text" name="lastname" />
  <input type="password" name="pwd" />
  <input type="radio" name="sex" value="male" /> Male
  <br />
  <input type="radio" name="sex" value="female" /> Female
  <input type="checkbox" name="card" value="credit" /> Credit
  Card
  <br />
  <input type="checkbox" name="card" value="debit" /> Debit Card
  <input type="reset" value="Reset">
  <input type="submit" value="Submit">
</form>
```

# Lesson 8: Wrap-up

---

- Any questions.

# Lesson 9: Some more tags

---

- `<img>`
- `<font>`
- `<div>`

# <img>

- Embeds an image in an HTML page.
  - The <img> tag creates a holding space for the referenced image.
  - The <img> tag has two required attributes: src and alt.
  - It does not have a closing tag.
- Attributes:
    - alt:
      - Specifies an alternate text for an image.
    - src:
      - Specifies the URL of an image.

# <font> </font>

- The <font> tag specifies the font face, font size, and font color of text.
- It has a closing tag.
- Attributes:
  - color:
    - Specifies the color of text.
  - face:
    - Specifies the font of text.
  - size:
    - Specifies the size of text.

# `<div>` `</div>`

- The `<div>` tag defines a division or a section in an HTML document.
- The `<div>` tag is often used to group block-elements to format them with styles.
- It has a closing tag.
- Attributes:
  - `align`:
    - Specifies the alignment of the content inside a div element.

# Lesson 9: Wrap-up

---

- Any questions.

# Some Important Points

---

- Use indentation while coding.
- Always use closing tags or the conventions.
- We can use **class** and **id** attributes with all elements to group them together and specify their styles.
- For windows use Notepad++.
